## support our **STUDENT TEAMS**

In the last few years, Waterloo Engineering student teams have built an SUV that runs on hydrogen, a flying robot that can sniff out bombs, and a solar car that set a world record for the longest journey.

Being part of a student team is just one of the ways our students gain hands-on experience. They take on every part of a project, from conception to competition. They learn about teamwork, strategy, finance, and communication. They tackle engineering challenges that have been known to daunt whole industries. And they do it – some of them – in spaces smaller than your garden shed.

An important part of our Vision 2010 strategic plan is to build new space, for teaching, for research – and for our student teams. They're already doing great things. Imagine what they could do with a little elbow room.

*Let's find out.*

*Yes, I'd like to help build new space for  
Waterloo Engineering's student teams.*
