UW Clean Snowmobile Team Spreads Joy to Kitchener-Waterloo!

Members of the University of Waterloo Clean Snowmobile Team set out to make the 2008 Christmas Season one to be remembered for years!

Donning our festive hats and bright red noses, team members set out to assemble a one-of-a-kind float. Working with the Waterloo Aerial Robotics Group (WARG) and UW Robotics team, we were able to devise a unique theme - "Presents under the Christmas tree." The tree was carefully decorated with tinsel and atop the tree was an official UW engineering hardhat. Under the tree were the carefully positioned presents - an airplane, some robots and a snowmobile.

Once the float was assembled, Santa's helpers woke up early to head out for the parade. What started as a dark and dismal day became one full of warmth and joy from children's smiles. As the parade progressed down King St., the UW Engineering Team handed out candy to everyone, young and old who were waiting to see dear old Saint Nicholas. As the parade wound down, it was evident that everyone knew that Christmas was just around the corner—a snowmobile was out in full force.

Special thank you to UW Engineering for organizing the event, and to the UW Robotics and WARG clubs for sharing in this experience. Also a special thank you to our sponsors for your continued support and encouragement.

Happy Holidays and all the best in the New Year!
